

Question 2

[step 1]

Define the set \mathcal{G} of formulas that uoc $\{\neg, \wedge\}$

Let \mathcal{G} be the smallest set such that

BASIS: If x is a propositional variable, then $x \in \mathcal{G}$

INDUCTION STEP: If $F_1, F_2 \in \mathcal{G}$, then $\neg F, (F_1 \wedge F_2) \in \mathcal{G}$

[step 2]

WTS: For all $F \in \mathcal{G}$ there exists F' such that

F' uoc from $\{\underline{1}, \ll\}$

BASIS: Let $F = x$, where x is a propositional variable.

Let $F' = x$

Then F' uoc $\{\underline{1}, \ll\}$

and $F' \text{ LEQV } F$, as wanted

INDUCTION STEP: Let $F_1, F_2 \in \mathcal{G}$

Suppose F'_1, F'_2 uoc $\{\underline{1}, \ll\}$ and

$F'_1 \text{ LEQV } F_1$ and $F'_2 \text{ LEQV } F_2$ [IH]

Case 1: $F = \neg F_1$

Let $F' = (\underline{1}F_1 \ll \underline{1}F_1) \ll (F_1 \ll \underline{1}F_1)$

then F' uoc $\{\underline{1}, \ll\}$ and

$$\begin{aligned} F' &= (\underline{1}F'_1 \ll \underline{1}F'_1) \ll (F'_1 \ll \underline{1}F'_1) \\ &\text{LEQV } (\underline{1}F_1 \ll \underline{1}F_1) \ll (F_1 \ll \underline{1}F_1) \\ &\text{LEQV } (\underline{1}F_1 \ll \underline{1}F_1) \ll (\neg F_1) \\ &\text{LEQV } (\underline{0}F_1) \ll (\neg F_1) \\ &\text{LEQV } \neg F_1 \\ &= F \end{aligned}$$

as wanted.

[by given]

[by IH]

[since $F_1 \ll \underline{1}F_1$ sastified if F_1 falsified]

[since $x \ll x$ always falsified]

[since $\underline{0}F_1 \ll \neg F_1$ sastified if $\neg F_1$ sastified]

[by given]

Case 2: $F = F_1 \wedge F_2$

Let $F' = (F_1 \ll \underline{1}F_1) \ll F_2$

Then F' uoc $\{\underline{1}, \ll\}$ and

$$\begin{aligned} F' &= (F'_1 \ll \underline{1}F'_1) \ll F'_2 \\ &\text{LEQV } (F_1 \ll \underline{1}F_1) \ll F_2 \\ &\text{LEQV } (\neg F_1) \ll F_2 \\ &\text{LEQV } F_1 \wedge F_2 \\ &= F \end{aligned}$$

as wanted.

[by given]

[by IH]

[since $F_1 \ll \underline{1}F_1$ sastified if F_1 falsified]

[since they have the same truth tables]

[by given]

[step 3]

Since $\{\neg, \wedge\}$ is complete, therefore $\{\underline{1}, \ll\}$ is also complete. ■
