Question 1:			
Question 3:			

Question 1.

Profit per Trail Mix
$$A = 7 - 1 \times (\text{cost of dried fruit})$$

 $-1.5 \times (\text{cost of nuts})$
 $-(\text{cost of tin can})$
 $= 7 - 1(1) - 1.5(2) - 1.4$
 $= 1.6$

Profit per Trail Mix
$$B=6-2 \times (\text{cost of dried fruit})$$

 $-1 \times (\text{cost of nuts})$
 $-(\text{cost of resealable bag})$
 $=6-2(1)-1(2)-0.6$
 $=1.4$

Question 3.
